Digital transistor motor outputs for pulse-widthmodulated motor control

12VDC Battery input power terminals

remote controlled output terminals (12VDC @ 0.6A)

Built-in manual override terminals

Bluetooth low energy Smartphone communications processor Motion control microprocessor for digital motor control

FOB remote control communications microprocessor

Digital Keypad connector and cable

Optional Helm Switch w/LED input terminals

State-of-the-art surface mount technology

Actuator motor power terminals

Digital motor encoder feedback terminals for Electronic Synchronization and precise motion control
